Project Name	Intergalactic Space Travel Request (ISTR) System
Maximum Marks	2 Marks

Customer Problem Statement

The Customer Problem Statement helps identify the needs, challenges, and expectations of users involved in the intergalactic mission request process. It focuses on understanding the user's perspective so that the developed solution addresses real operational problems rather than assumptions.

For the Intergalactic Space Travel Request (ISTR) system, defining customer problem statements helps identify pain points faced by mission requesters and mission control administrators. Understanding these challenges enables the development of a centralized ServiceNow application that automates mission requests, approval workflows, notifications, and mission tracking, resulting in a more efficient, transparent, and secure process.

 I am	<i>Describe customer with 3-4 key characteristics – who are they?</i>	A Mission Requester (Scientist / Astronaut / Research Officer) I work in space research and need to plan intergalactic missions. I submit mission requests and depend on approvals from multiple departments. I require accurate information, timely updates, and transparency.
 I'm trying to	<i>List their outcome or "job" the care about – what are they trying to achieve?</i>	Submit an intergalactic space travel request quickly and track its progress. I want to provide all mission details, attach required documents, and get the request approved without delays so that the mission can be scheduled on time.
 but	<i>Describe what problems or barriers stand in the way – what bothers them most?</i>	The existing process is manual, slow, and involves multiple offline approvals. I have to follow different steps, contact multiple people, and wait for offline verifications. There is no central system to submit, track, or get updates.
 because	<i>Enter the "root cause" of why the problem or barrier exists – what needs to be solved?</i>	Because there is no integrated system to automate mission requests, approvals, and notifications. Data is scattered across departments, there is no workflow automation, no role-based access, and no real-time tracking.
 which makes me feel	<i>Describe the emotions from the customer's point of view – how does it impact them emotionally?</i>	Frustrated, worried, and uncertain. Delays in approvals affect mission planning and resources. Lack of transparency and communication creates stress and reduces confidence in the process.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Mission Requester (Scientist / Astronaut / Research Officer) who needs to submit intergalactic space mission requests and coordinate with multiple departments for mission approval.	Submit an intergalactic space travel request quickly, attach all required mission details, and track the approval process until the mission is approved.	The current mission request process is manual, time-consuming, and requires approvals from multiple departments, making it difficult to monitor the request status.	There is no centralized platform to automate mission requests, approval workflows, notifications, or real-time mission tracking.	Frustrated because mission approvals take longer than expected, communication is unclear, and I have no visibility into the progress of my request.
PS-2	A Mission Control Administrator responsible for reviewing, managing, approving, and monitoring all intergalactic mission requests.	Review mission requests efficiently, coordinate approvals between departments, assign missions, and maintain complete visibility of every mission throughout its lifecycle.	Mission information is scattered across different departments, approvals are difficult to coordinate, and tracking mission progress manually consumes significant time.	The existing process lacks workflow automation, centralized dashboards, reporting capabilities, and role-based access control for efficient mission management .	Overwhelmed by repetitive manual work, concerned about approval delays, and unable to efficiently manage mission operations.
